

Palladio – Semi Cassette Awning from B A T Italy

The **PALLADIO**, is the latest generation of Folding Arm Awnings from Italy, featuring the unique cassette style storage for the fabric, and the clever use of a deep front bar, gives the appearance and function of a full cassette awning, but not the price.

The use of a 40mm square steel section offers a rigid mounting base for Palladio. The full depth of the hood fits snugly against the wall and does not allow debris etc to collect at the back of the awning. The styled hood adds a further quality look to the awning.

Viewed from across the street, or from your front gate, the **PALLADIO** appears to offer the self same benefits offered in Full Cassette model folding arm awnings. The difference is revealed, only when standing direct beneath the awning where the colour matched powder-coated arms are visible, BUT the fabric remains secure and out of sight in the separate cassette module.

The **PALLADIO** is offered in a White powder-coated finish, and other colours are available at extra cost. In this way **PALLADIO** can be matched to your décor, thus enabling it to un-obtrusively add the sun-protection you desire from such a quality awning.

The **PALLADIO** can be manufactured as small as 2010mm, with a 1600mm projection. On the other hand, the maximum size for **PALLADIO** is 7 metres wide with a projection of 3600mm.

The standard **PALLADIO** model is driven by a manual gear-box, and it is highly recommended that any **PALLADIO** over 6 metres in width should be motorized.

The arm brackets on the **PALLADIO** model are spanner adjustable to enable the pitch of the awning to be varied. It is recommended each arm be adjusted by relatively small increments (200mm - 300mm), with all arms being adjusted in rotation. The front bar should always be supported when the pitch is being changed.
