

Armony & Base-Plus

(Full Cassette Folding Arm Awnings from B A T Italy)

The ARMONY Folding Arm series demonstrates the ultimate in Folding arm technology with its fully enclosed cassette to protect Both the fabric and the components from the elements.

The standard colour for ARMONY is White, but other personally Selected powder coat colours are available at extra cost.

ARMONY can be built as small as 2050mm wide, with a projection of 1600mm. The largest ARMONY will span some 7 metres in width with a maximum projection of 3600mm.

Although ARMONY is available as a manual gear-box operation, most clients prefer the motorized option with a remote control, or wall switch.

With a range of arm sizes (1600mm, 1850mm, 2100mm 2350mm, 2600mm 2850mm 3100mm and 3600mm) the ARMONY full cassette model combines elegance with functionality, to provide the ultimate in sun-protection.

The pitch adjustment on the ARMONY models is set at installation and is usually some 15° off the horizontal. Flat installations are NOT recommended.

BASE-PLUS Folding Arm models share the same fully enclosed cassette as the Armony Series.

The distinguishing features of the BASE-PLUS models are the projection, which extends to 3100mm, and the fact the BASE-PLUS models are fixed to the wall or ceiling using the brackets at each end of the cassette.

The BASE-PLUS is available in standard White or other, personalized powder coat colours are available at extra cost.

The BASE-PLUS models are available with either manual gear-box operation, or motorized, to be run using a remote control, or wall switch. A number of sensors are also available when the awning is motorized, to help protect your investment.

The BASE-PLUS can be built as small as 1910mm wide, with a 1600mm projection. The largest BASE-PLUS models extend to 5000mm wide, with a projection of 3100mm. There is a range of arm sizes available - 1600mm, 1850mm, 2100mm 2350mm, 2600mm, 2850mm and 3100mm.

The neat, slim lines of the closed cassette provide ultimate protection of the awning and the components, including the fabric. The pitch of the awning is adjustable at the time of installation. Usually, the awning is installed at 15° off the horizontal. Flat installations are NOT recommended.

Palladio – Semi Cassette Awning from B A T Italy

The PALLADIO, is the latest generation of Folding Arm Awnings from Italy, featuring the unique cassette style storage for the fabric, and the clever use of a deep front bar, gives the appearance and function of a full cassette awning, but not the price.

The use of a 40mm square steel section offers a rigid mounting base for Palladio. The full depth of the hood fits snugly against the wall and does not allow debris etc to collect at the back of the awning. The styled hood adds a further quality look to the awning.

Viewed from across the street, or from your front gate, the PALLADIO appears to offer the self same benefits offered in Full Cassette model folding arm awnings. The difference is revealed, only when standing direct beneath the awning where the colour matched powder-coated arms are visible, BUT the fabric remains secure and out of sight in the separate cassette module.

The PALLADIO is offered in a White powder-coated finish, and other colours are available at extra cost. In this way PALLADIO can be matched to your décor, thus enabling it to un-obtrusively add the sun-protection you desire from such a quality awning.

The PALLADIO can be manufactured as small as 2010mm, with a 1600mm projection. On the other hand, the maximum size for PALLADIO is 7 metres wide with a projection of 3600mm.

The standard PALLADIO model is driven by a manual gear-box, and it is highly recommended that any PALLADIO over 6 metres in width should be motorized.

The arm brackets on the PALLADIO model are spanner adjustable to enable the pitch of the awning to be varied. It is recommended each arm be adjusted by relatively small increments (200mm - 300mm), with all arms being adjusted in rotation. The front bar should always be supported when the pitch is being changed.
