

Pleated Pergola Shades

Pleated Pergola Shades help keep your outdoor living area cool and comfortable, especially under a polycarbonate roof. They reduce the heat and glare and are used under a pergola to provide shade in the summer but still allow the full winter sun through when retracted.

This awning operates with a pull stick or a cord system with stainless steel pulleys for hassle free operation. Gliding on a series of extruded aluminium rails with nylon rollers ensures smooth, snag free operation for many years.

Pleated Pergola Shades can be made up to 12 metres wide. If more coverage is required several awnings may be fitted side by side and operated individually.

There is an almost endless choice of fabric colours and patterns to choose from.

Fabric choices are :

Acrylic canvas - Sun proof and water resistant, the most popular choice.

Shade mesh - Reduces glare and doesn't hold water.

Solid PVC - Water proof & heavy duty.
