

VERTISCREEN

The Perfect Sun Protection Solution

The VERTISCREEN range of products have been specifically designed for Australian conditions, offering the very best in Sun Protection.

The stylish, aluminium powder-coated head-box offers grace and style to complement every home or office complex. The slim line design is offered in two head-box sizes – 95mm by 95mm, or 125mm by 125mm.

The VERTISCREEN range offers a choice of two side channels, or the ever popular Stainless Steel Wire Guide Cable. The standard side channel is an extruded aluminium powder-coated extrusion to match the head-box. The optional, 100mm wide side channel is also an extruded aluminium section, again powder coated to match the head box colour. The Stainless Steel wire guides offer an un-obtrusive method of providing a side guide system for your awning.

VERTISCREEN, although designed as an outside awning, can just as easily be fitted inside the home or office, to meet your needs. The smaller 95mm x 95mm head-box, with a suitable fabric will enable drops of up to 2800mm to be achieved.

All VERTISCREENS are custom made to your size and colour requirements, ensuring you get what you want with Vertiscreen.

The VERTISCREEN product range can be operated by gear-box and crank handle, or by electric motor – an option proving more popular with customers, every day. The motorised VERTISCREEN can be operated by either remote control, or via a wall switch – the choice is yours.

Made from Australian produced aluminium extrusions, rust will not be a problem with VERTISCREEN. The roller tube, inside the fully enclosed cassette head-box, is galvanized steel.

The VERTISCREEN range has been designed to keep the sun off the glass areas of your windows thus reducing the heat in your office or home. Depending on the choice of fabric, VERTISCREEN can provide a panoramic view of your garden with see through fabrics, or offer a near block-out condition with room darkening qualities – these choices depend on fabric selection. Choosing the right fabric for your circumstances, will ensure the VERTISCREEN models meet all of your expectations.

There are a number of variants of the Vertiscreen product, all aimed at ensuring you, the customer get what you want. We can offer a lock-down system using our custom designed mechanism with a stainless steel pin. This system can be operated manually with a gear-box and crank handle, or the Vertiscreen can be raised and lowered using an electric motor.

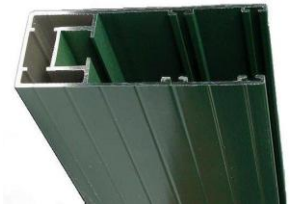

VERTISCREEN

The Perfect Sun Protection Solution

Stainless Steel Deck Plate,
Bottom Bush & Cable

Another option we offer is our Wind-Breaker spring package, which is only offered with manual control. This innovative package reduces the load on gear-box teeth, by cushioning the impact of the wind on the fabric.

End Section of the
100mm Wide Side
Channel

We also offer Stainless steel cables in lieu of the side channels. The stainless steel cables are secured top and bottom by Stainless steel fittings – one inside the head-box, the other secures the bottom end of the cable, by using either an L bracket, which can be secured to a wall or verandah post, or by our Stainless Steel Deck Plate, securing the cable directly to the deck, or flooring etc.

Tear-Drop Anodised
Aluminium Bottom Rail

One of the highly acclaimed features of the VERTISCREEN range is our tear-drop aluminium bottom rail – again powder-coated to match the other parts of the awning. The cleverly designed end caps used with the newly styled bottom rail can be set in a floating position, or can be re-set to fixed position to always ensure the smooth operation of your awning.

Strap Runner attached to
Tear Drop Bottom Rail

End Section of the
Standard Side Channel

When Vertiscreen is used in-doors, the side guides (either aluminium side channels, or 316 grade Stainless Steel cable), may be dispensed with, and we offer a flush fitting PVC end cap to finish the look of the bottom rail.

End Section of
Vertiscreen Head-Box
Sizes, 95mm x 95mm OR
125mm x 125mm

The VERTISCREEN models have proven extremely popular with architects, builders, home owners and commercial property owners and developers.
